Also available:

Purchase these 10" pneumatic tires for use on rough terrain and grass.

The Freedom Chair

Model 1550

Stairs create a barrier for the mobility impaired. People who use a wheelchair or who have difficulty walking are often unable to negotiate stairs or rough, uneven terrain. The Freedom Chair is the answer for millions of such people.

It's dangerous to physically carry someone up or down stairs. Wheelchairs were never designed to be lifted or dragged over stairways. The Freedom Chair is the perfect solution! The Freedom Chair provides a safe and comfortable way to transport someone up stairs, down stairs or across uneven terrain.

The Freedom Chair is perfect for the home or for use when travelling: The chair folds for easy storage and weighs a mere 19 pounds so the user can take the chair wherever they go and use it any time.

The Freedom Chair is more than just a transportation solution. It also serves as an emergency evacuation device for the home or hi-rise building.

One attendant can navigate across level ground

Two attendants can carry up or down stairs
